Trans. of Annales [de] Radioélectricité (France)  
1948, v. 3 [no. 14] p. 339-343.

DESCRIPTORS: Cathode ray tubes, \*Electron guns,  
Design, Resolution, \*Electron microscopes,  
\*Diffraction analysis.

A description is given of an electronic gun for use in diffraction analyzers and microscopes. Included are results of measurements of the geometric definition of the spot and the yield. The gun, used without a condenser, results: at 45 KV a current density ten times higher and a yield of about 20%, or 13 times higher than that of the conventional gun without condenser. The total consumption of high voltage current is approximately equal to 40 A. (Author)
